**Aim :-** Write a query to implement Data Control Language(DCL) and Transaction Control Language(TCL) commands

**Objective :-** To learn DCL commands like Grant and Revoke privileges to the user and TCL commands to commit the transactions and recover it using rollback and save points.

### Theory:

#### Data Control Language:

DCL commands are used to grant and take back authority from any database user.

- Grant
- Revoke

a. Grant: It is used to give user access privileges to a database.

Example

1. GRANT SELECT, UPDATE ON MY\_TABLE TO SOME\_USER, ANOTHER\_USER;

b. Revoke: It is used to take back permissions from the user.

Example

1. REVOKE SELECT, UPDATE ON MY\_TABLE FROM USER1, USER2;

#### Transaction Control Language

TCL commands can only use with DML commands like INSERT, DELETE and UPDATE only.

These operations are automatically committed in the database that's why they cannot be used while creating tables or dropping them.

Here are some commands that come under TCL:

- COMMIT
- ROLLBACK
- SAVEPOINT

## Vidyavardhini's College of Engineering and Technology

---

a. Commit: Commit command is used to save all the transactions to the database.

Syntax:

1. COMMIT;

Example:

1. DELETE FROM CUSTOMERS
2. WHERE AGE = 25; 3. COMMIT;

b. Rollback: Rollback command is used to undo transactions that have not already been saved to the database.

Syntax:

1. ROLLBACK;

Example:

1. DELETE FROM CUSTOMERS
2. WHERE AGE = 25; 3. ROLLBACK;

c. SAVEPOINT: It is used to roll the transaction back to a certain point without rolling back the entire transaction.

Syntax:

2. SAVEPOINT SAVEPOINT\_NAME;

## Vidyavardhini's College of Engineering and Technology

### Department of Artificial Intelligence & Data Science

Implementation:

```
4  -- Start a transaction
5  • START TRANSACTION;
6
7  -- Insert a new album into the Album table
8  • INSERT INTO Album (AlbumID, Title, ReleaseYear, ArtistID)
9  VALUES (1, 'New Album', 2024, 1);
10
11 -- Set a savepoint within the transaction
12 • SAVEPOINT insert_album;
13
14 -- Insert a new song into the Song table
15 • INSERT INTO Song (SongID, Title, DurationInSeconds, AlbumID)
16 VALUES (1, 'New Song', 180, 1);
17
18 -- Rollback to the savepoint to undo the insertion of the song
19 • ROLLBACK TO SAVEPOINT insert_album;
20
21 -- Commit the transaction to make changes permanent
22 • COMMIT;
23
24 -- Revoke INSERT permission on the Album table from a user
```

Conclusion:

1. Explain about issues faced during rollback in mysql and how it got resolved.

During rollback in MySQL, issues can arise if there are concurrent transactions or if the rollback process encounters errors such as deadlocks. These issues are resolved by ensuring proper transaction management, handling deadlock situations, and using appropriate isolation levels to minimize conflicts between transactions.

2. Explain how to create a user in sql.

To create a user in SQL, you typically use the CREATE USER statement followed by the username and password. Optionally, you can specify additional parameters such as permissions and privileges. For example:

```
CREATE USER 'username'@'hostname' IDENTIFIED BY 'password'.
```
